The Tree Planters of America

A POTENT FACTOR FOR THE
Reforestation of the United States

AND EXTENSION OF PRACTICAL ARBORICULTURE
BY THE

American Farmer Boys

(FIFTH EDITION, AMPLIFIED)

ISSUED BY

The National Business League
of America

CHICAGO, U. S. A.

1911

“When boys and trees are good comrades, nothing is to be feared for either of them.”

—News-Tribune, Detroit, Mich.

“The Tree Planters of America—A glorious idea, and I believe it is so good and grand that it will be carried out by its own virtues. It is one of the finest things ever proposed to the American people.”

—James T. Du Bois

(American Consul-General at Singapore.)

“With distinct pleasure and full appreciation, I have read your plan for the organization of the ‘The Tree Planters of America.’ It is the best suggestion I have seen on the matter considered. The conception seems really inspired.

“To organize the American boys in such thorough and systematic way, and under such splendid leadership in good work, is an endeavor that cannot be too highly commended.

“Aside from the great benefits that will certainly come through such wise plans for reforestation, the principles of patriotic devotion incidentally inculcated will thrill the nation, and from border to border will pulse as one great throbbing heart, loyalty and love for the future of the whole country.”

—William J. Northen, Atlanta

(Formerly Governor of Georgia.)

FOREWORD

THE agriculture, industries and commerce of the United States, and disastrous forest fires, have consumed the timber of 300,000,000 acres out of the original forests of 850,000,000 acres. Most of this timber has been cut and marketed, or destroyed, during recent years, and the remainder is rapidly vanishing in the ever-increasing demands of modern activities. As a nation we are fast approaching a timber famine, and, unless immediate, thorough and persistent action be taken for country-wide replenishment, our successors will have just and ample reason for criticism and condemnation.

Private forestry has accomplished something. The few notable instances only indicate what might be achieved by a general movement. A report from the Department of Agriculture, approved by Secretary Wilson, May 29, 1909, gives the total area of planted forest land as not exceeding 965,000 acres. Yet the total area of land which would yield its greatest returns from planted forest is more than 56,000,000 acres. Surely here is a broad and promising field for the timely proposition — "*The Tree Planters of America.*"

The suggestion is an American idea, presented by the National Business League of America for the practical reforestation of the United States, and for the physical, moral and spiritual up-lifting and usefulness of the American Boy of the twentieth century and the countless

generations to follow him. Systematic planting, culture, and conservation of trees; prompt utilization of fallen timber for fuel or the industries; a permanent and profitable wood lot for every farm; co-operation of Art with Nature in the transformation of the landscape from the unsightly to the beautiful. These should be cardinal duties of the youthful Tree Planters.

The farmer should raise his crop of trees as he does other products of the farm. It will, however, be a crop in perpetuity, from father to son through all future years. With the Tree Planters active the cost of reforestation will be reduced to a minimum; the burden of expense resting lightly on each unit of the movement, *ie.*, on the nation, state, county, township and individual.

There is nothing in the plan to inspire an excessive militant spirit or to develop habits of destructiveness. It does not, in any sense, emphasize the dubious "Cowboy and Indian" idea, so manifestly, and sometimes fatally, operative among the boys in the trail of a Wild West show, or under the baleful influence of the degenerate dime novel. The life of the tree planter, the farmer and the homebuilder is distinctly along lines of practical achievement, beneficence and universal peace.

The cordial commendations by leaders of thought and action in many lines of endeavor, from every section of the country, some of which are herein submitted, indicate a deep and widespread interest in scientific re-forestation by the farmer boys and youth of the Nation. Hence it is earnestly hoped that the United States Government, the States, and all the various organizations of the country with aims for the general welfare, now and hereafter, will heartily co-operate to carry the "Tree Planters of America" to a conclusion of lasting results.

ORIGIN OF THE PROPOSITION

THE TREE PLANTERS OF AMERICA

NATIONAL CONSERVATION COMMISSION

Washington, June 27, 1908.

Mr. Austin A. Burnham, Chicago, Ill.

Dear Mr. Burnham: You will recall that the Declaration of the Governors at the White House Conference recommended that each State appoint "a commission on the conservation of natural resources to co-operate with each other and with any similar commission of the federal government." Acting on this suggestion, President Roosevelt, on June 8, appointed a National Conservation Commission. The Executive Committee of the Commission met in Chicago, June 19, arranged a plan of work, and decided also to issue occasional bulletins. I have much pleasure in enclosing a copy of the first of these, and shall be very glad to send you later issues if you desire.

Since you took part in the Conference, and in view of the peculiar interest of the National Business League of America in the Conservation of Natural Resources, it occurs to me that you may be willing to assist the National Commission with suggestions, either on your own behalf or on that of your organization, concerning lines of inquiry, the nature of the report, or other matter; and I assure you that any expression from you will be welcome. The Commission would especially appreciate your co-operation if you would consent to give it detailed and specific information in your own field. Would it be possible for you to do so?

Sincerely yours,

GIFFORD PINCHOT,
Chairman.

(Responsive to the above request, the National Business League of America, on February 12, 1909, suggested the plan of organizing the Tree Planters of America, which follows):

REFORESTATION.

By the farmer boys and youth of the United States through a great national organization to be known as

THE TREE PLANTERS OF AMERICA.

It must be evident to every reflective mind that in order to make reforestation permanent and far-reaching, the idea of its value and absolute necessity must be impressed upon the farmer boys of the country, for the forests of the future will be in their hands. For all time the boys of today will be the men of tomorrow, and exactly in proportion as the boys of America are trained in the varied fields of human endeavor, so will be the future of America.

Reared to the practice of tree-planting, conservation of the timber supply, and schooled in the science of forestry, the habit will become fixed for life, and the custom of tree-planting will have been extended to all parts of the United States, and all the farmers will be practical foresters.

All farmer boys and youth of the country should be eligible to membership in the Tree-Planters.

There should be systematic tree planting in profitless pastures, nooks, ravines; on hillsides and house lawns; on useless or worn-out spots or partly denuded forest acres on the farm, and in every place where the soil is not yielding a reasonable contribution to the general welfare.

From time to time, through publications and by personal visits of experts from the United States forest service, the "Tree-Planters" should be instructed in scientific forestry in all its branches.

The national government, or the state, or both, should confer medals, badges or other tokens of recognition for meritorious work. This will strengthen the ambition of the boys and increase their interest and activity in the task of tree planting.

PLAN OF ORGANIZATION.

The plan suggested is to organize the "Tree-Planters of America" largely through the agency or co-operation of farmers' granges, clubs, schools, institutes, educational and co-operative unions, state and local agricultural associations.

The organization should be composed of groups; each state group to be known under the state name, as the "Ohio Group," with the governor of the state as president, the state forester, or such other state officials as the governor may select, as aids. Then county groups, with the county commissioners or other officials at the head; then township groups, under control of the trustees or other officials; all to be under the direction of the United States forester, or the chairman of the National Conservation Commission.

The heads of the township groups should report to the heads of the county groups; the heads of the county groups should report to the heads of the state groups, and the heads of the state groups should report to the United States forester or the chairman of the National Conservation Commission. Thus will be completed a perfect chain of organization linking the coming American citizens into one mighty, irresistible force for permanent reforestation, reclamation of our water courses and water powers, and advancement of our industries.

It is suggested that the president of the United States set the machinery for organization in motion by issuing a proclamation of recommendation to the governors, who are to be the presidents of the state groups; the governors to issue proclamations recommending organization of the county and township groups as above indicated.

Thus has been suggested that which it is hoped may prove to be a pleasant and profitable pastime for "Young America," along the lines of that sterling injunction, "Teach your boys that which they should practice when they become men."

It is believed that, rightly exploited and managed, the movement would become of vast scope and early results. Boys are easy to receive and hold impressions, and once their ambitions are quickened, are enthusiastic, cordially responsive and persistent; besides behind them would be the right-minded, progressive father who would encourage the sons in the great work of reforestation.

The system once established will become a part of the life of the farmer. He may learn of the timbers that will best thrive in his particular section of the country and of those kinds most needed by the various industries.

Not only on the farm but in the suburbs of our large towns and cities should tree planting, for use and for ornament, be practiced by the boys and young men of America. These foresters of the future should also learn the best methods of trimming out the second growth of deforested lands wherever the soil is not needed or unfit for tillage, so that the most promising saplings may grow unhampered; furthermore become familiar with the diseases and parasites of trees and the effective means for their extinction.

Through tree-planting and tree culture, in boyhood, the farmer easily acquires the habit of making the forest an invaluable factor of his farm; restoring that which, often with wasteful methods and with little thought of future needs, has been lavishly consumed.

The proposition should appeal to all interests, for it is essentially constructive and conservative, with no element of friction in it.

REMARKS OF AUSTIN A. BURNHAM, GENERAL SECRETARY OF THE NATIONAL BUSINESS LEAGUE OF AMERICA, AT THE NATIONAL CONSERVATION CONGRESS AT ST. PAUL, MINNESOTA, SEPTEMBER 8, 1910.

Mr. President and Members of the National Conservation Congress:

I deeply appreciate the privilege, and am not insensible of the honor, of briefly addressing this great Congress of representative men in every field of human endeavor, who are met to plan for the conservation of the natural resources of the nation.

First, I wish to emphasize the fact that the patriotic men who are planning conservation today are mostly not the men who will execute. The men who are to conserve our lands, waters and minerals, and perpetuate our forests, are now running around in knickerbockers, or being rocked in the cradles of the nation. They and their children and their children's children, down along the line of the centuries, will carry out the vital precepts and principles of this great conservation movement—this timely warning cry against careless national extravagance—this imperative codicil to the Declaration of Independence.

There are some resources we cannot restore, but may conserve or substitute. As one door closes another opens. Coal, iron, copper and other products of the mine, when once consumed cannot be reproduced, but for all time the tree may be perpetuated. The friendly, faithful, useful tree that conserves the raindrop with its treasures of light, heat, power and life-giving properties for vegetation and fills the world with inspiring beauty.

The restoration and preservation of our forests, then, and an adequate policy of accomplishment, becomes of the weightiest importance. In this connection I beg to suggest the *American Farmer Boy*. It is proposed to organize the farmer boys and young men of this country into a great national body to be known as the "*Tree Planters of America*." The plan involves instruction and actual practice in tree-planting and tree-culture, with suitable prizes for excellence and results. It aims to permanently check the wastefulness of go-as-you-please forestry now evident from every car window in this country.

In brief, without entering into details, the suggestion seeks to organize all farmer boys from twelve to twenty years of age as Tree Planters, in every commonwealth, county and township of the United States; with the co-operation of the forestry department at Washington, governors of states, and the proper official heads of town and county governments.

The plan in general unifies the individual, the state and the nation, into one vast organized body for the practical reforestation of the country. The system once made operative will become an inseparable part of the life of the farmer of the future. It is kindred to the splendid educational and philanthropic work of Mr. Bernard N. Baker, the ideal and actual president of this Congress, and I hope it may merit your approval as *one* practical means to the end we all are aiming at.

The time for talking has gone by. The time for action has come. Therefore let us begin at the foundation and organize the coming men who are to do the actual work of reforestation. The mind of the American boy is plastic. The impressions he receives remain to the end. Teach him then to practice those things that make for permanent universal betterment, for with his brain and brawn he determines the destiny of this great American Republic.

PREAMBLE AND RESOLUTION UNANIMOUSLY ADOPTED BY THE BOARD OF DIRECTORS AND STANDING COMMITTEES OF THE NATIONAL BUSINESS LEAGUE OF AMERICA, SEPTEMBER 26, 1910. COPY FORWARDED TO THE PRESIDENT OF THE UNITED STATES.

WHEREAS, The rapid development of the agriculture, the various industries and the commerce of the United States have largely exhausted the forests of the country and thereby destroyed the natural currents of the water courses, reduced the water powers to a minimum of usefulness, defaced the landscapes, and resulted in disastrous floods and serious erosion or wastage of the soil; and

WHEREAS, It is evident that restoration and perpetuation of the forests, so far as practicable, have become imperative for the general welfare of the nation; and

WHEREAS, The National Business League of America has suggested that the farmer boys and youth of the United States be organized for the purpose of reforestation of the farms, tree culture and conservation of timber supplies, under the title and name—

"The Tree Planters of America"—to co-operate with the Forest Service of the Department of Agriculture of the Federal Government, state, county and municipal governments, farmers' granges, clubs, schools, institutes, educational and agricultural associations, along the following lines, viz.:

FIRST—The Tree Planters of America to be composed of groups; each state group to be known under the state name, as the "Ohio Group of the Tree Planters of America," with the Governor of the State as President, and such other state official or officials as His Excellency may elect as aids; also county and township groups with the proper officials in charge.

SECOND—The members of the Tree Planters of America to be instructed in scientific forestry, through publications and by personal visits of experts from the United States Forest Service. Periodical reports of progress from the various groups to be made through state organizations to the Forest Service, and annual distribution of medals or other prizes for excellence in results, by the Government, the State and auxiliary organizations; therefore be it

RESOLVED, That the President of the United States of America, be, and he hereby is, respectfully requested by the Board of Directors and Standing Committees of the National Business League of America, to issue a proclamation to the Governors of the different States of the Union, recommending co-operation along the lines indicated; and that the President further recommend to the Congress of the United States such legislation as, in his opinion, may be necessary to successfully carry out the plan as outlined by the National Business League of America.

PUBLIC OPINION

From George H. Maxwell, Executive Chairman and General Counsel, American Homecroft Society, Chicago.

Concerning the splendid article in the Chicago Evening Post, about your plan for "Banding the Boys of the Country to Rear Forests," it does seem to me that you have suggested something here which is an idea holding real, splendid possibilities of inspiration to thousands of young men in every part of the United States, from a purely patriotic and philanthropic point of view, if you can get those who are interested in the propagation of forestry ideas to take up your thought and push it forward. I most sincerely hope that they will do so.

This country will be what the young men who are now growing to manhood will make it. Every boy who is inoculated with the right ambition and inspirations in reference to the future of the country during the next few years will do a work that will leave an enduring mark on the sands of time through all future years. There are very few who realize that "As a man thinketh, so is he," and "as the people of a nation think, so will the nation be," and if you can only get people interested in a thing, they will carry it out. If the boys of this country could be interested in forestry as much as they are now interested in baseball, we would soon have an end of all our forestry troubles.

M. P. Lilienthal, Cashier The Anglo-California Trust Company, San Francisco.

I am heartily in accord with the plan to organize an army of boys for the reforestation of our waste lands, and trust that the League will meet with success.

George W. Sheldon, G. W. Sheldon & Company, Chicago.

The plan as outlined can no doubt be carried out if it can get a start, and when started, I feel sure that it would arouse wonderful enthusiasm among the farmer boys of America.

George Frederic Stone, Secretary, Board of Trade of the City of Chicago.

Concerning the very interesting, practical and patriotic article entitled "Banding the Boys of the Country to Rear Forests," I hail not only with approval, but with delight, the movement which is making such progress in the direction of the conservation of our natural resources, and the determination to stop the waste of our splendid natural wealth which has been going on for generations.

PUBLIC OPINION

Bernard N. Baker, Chairman Executive Committee Moral Education Board, Baltimore; formerly President of the National Conservation Congress.

It is a splendid idea. I congratulate you on the work you are undertaking, wish you success, and assure you that I will assist all I can.

C. A. Green of R. G. Dun & Co., New York.

I consider your idea the best I have ever seen for accomplishing good results along this line. If the boys and young men can be interested in such a movement success is absolutely assured in my judgment. I sincerely trust that sufficient interest can be aroused to carry the plan through.

C. H. Plummer, President Merchants' and Manufacturers' Association, Los Angeles, California.

Your plan, as outlined in the Chicago Evening Post of August 25th, to organize the boys of the farms of the United States as a body of tree planters and foresters, appeals to me as one of the truly great ideas which has been brought to my attention in many years. I believe that this scheme, thoroughly elaborated, will prove a solution of a problem, which today is one of paramount importance to the American nation. I am convinced that every man, whoever or whatever he may be, whether his position be exalted or lowly, who is possessed of a sense of patriotism will bid you, as I do, God speed in your labor of love. Be assured of any co-operation in my power.

Honorable Rollin S. Woodruff, formerly Governor of Connecticut, New Haven.

The idea appeals to me and I believe that you have started a very wise and productive plan, and I sincerely hope that the idea may be carried to its fullest completion. I take great pleasure in commending the whole proposition.

William L. Brown, President Chicago Ship Building Company, Chicago.

The movement is unquestionably a practical and patriotic one, and, as outlined, will appeal favorably to every one having at heart the tree growth of our country; and the organization, as proposed, will undoubtedly do much toward the better protection of our forests.

PUBLIC OPINION

Elliott Durand, The Northern Assurance Company, Chicago.

I have carefully read, from beginning to end, the pamphlet, "The Tree Planters of America," and do not hesitate to say that nothing has come to me which so appeals to me as this happy solution of continuing our forests.

Reared in the country, and loving trees as I do animals, I believe the possibilities are unlimited. There are so many tracts on nearly every farm, east and west, where waste places may be made glad, that the early fruition of our hopes may be realized, with almost no expense. I heartily endorse the plan.

Honorable J. Frank Hanly, formerly Governor of Indiana, Indianapolis.

The plan seems practical and worthy of commendation.

Walter Fitch, of Walter Fitch & Company, formerly President Board of Trade, Chicago.

I think the idea a most excellent one, and trust it will be pushed aggressively.

Francis Beidler, Lumber Interests, Chicago.

All this tends in the direction of accomplishing a very laudable and worthy object, which the men of this generation will be sincerely thanked for by the thinking men of the generations to come, if they succeed in accomplishing something at least in the direction of this purpose.

Professor Emory R. Johnson, University of Pennsylvania, Philadelphia.

The future supply of forests in the United States must be maintained mainly by forestry upon private lands. National and State forestry can only very partially meet the situation. It would seem that your plan of organizing the boys of the country as "The Tree Planters of America" might awaken an interest in wood lots and forests that will do much to insure a future supply of timber in the United States.

Walter C. Gillett, President, Chicago Paper Company, Chicago.

I feel certain that it is a very important subject, and it looks to me as though the situation lay in just about such a scheme as outlined. I fully realize the importance of the devastation of our timbers and the necessity of replacing them, and would be in harmony with any action taken to improve our present condition.

PUBLIC OPINION

William H. Parlin, President Parlin & Orendorff Company, Canton, Illinois.

The plan suggested is a good one. I believe that if the young people are taught to realize the importance of keeping up our forestry it will be a move in the right direction.

Hon. John Wanamaker, Philadelphia.

The scheme seems to be practical.

Robert H. Harvey, President D. B. Fisk & Company, Chicago.

We heartily endorse the work of the "Tree Planters of America."

M. E. Plain, Trask & Plain, Aurora, Ill.

I am heartily in accord with the movement for reforesting our waste lands.

Ward W. Willits, President The Adams-Westlake Company, Chicago.

The plan of reforesting the country through an organization of boys to be known as the "Tree Planters of America," appeals to me as being practical and feasible, and if properly organized will show results highly beneficial to the country.

Honorable Clark E. Carr, formerly United States Minister Plenipotentiary to Denmark, Galesburg, Ill.

The suggestion of a plan to reforest the country through "The Tree Planters of America" I most heartily approve.

I lived for four years, from 1889 to 1893, with my family, at Copenhagen. I learned there that the forests had been replanted and that there was maintained a splendid system to keep them up. Among other requirements, every one who cut down a tree was obliged to replace it with a good thrifty tree, properly set out, the same season. This requirement was enforced as to one's own land. If it was neglected the State Forester would plant the tree, for which he who cut its predecessor down would be required to pay, with costs of proceedings. This regulation applied to the whole Kingdom of Denmark.

Honorable Augustus E. Willson, Governor of Kentucky, Frankfort.

It seems to me that it is a very admirable plan, and if we can get our boys interested they will make a splendid army of tree planters.

PUBLIC OPINION

Honorable Elihu Root, United States Senator from New York.

In re "The Tree Planters of America," I think it would be a very useful thing to impress upon the minds of American boys generally the idea that it is a good thing to plant trees. It seems to be getting hold at the right end of the process of public education on that subject. I should think that a great many boys might be led to get their fathers to permit them to transplant small seedlings into lands that are now waste and unproductive, or to let them plant nuts in such land. The business is so fascinating that if you get a boy once interested in the growth of a single tree of his own raising he will be a tree planter all the rest of his life. If you get boys enough into this attitude we should very soon be changed from a tree-destroying to a tree-raising people.

C. H. Williamson, formerly President The Quincy Chamber of Commerce, Quincy, Ill.

The idea is most commendable, and is of a very practicable nature. It is a splendid channel for youthful enthusiasm and should be of untold benefit to the country.

George H. Barbour, Vice-President and General Manager The Michigan Stove Company, Detroit.

Concerning the plan of The National Business League of America to reforest the country, through an organization of farmer boys and youth; it seems to me this is a very important step, and if the plan had been inaugurated years ago, when our forests were being devastated, we would now have a new growth of timber in many sections where now we have but brush and stumps, etc. It is not too late to start, and I hope every one will feel interested to encourage and foster this work and that you may secure an organization necessary to carry on the work, thus insuring to the country, in the future, a fine growth of timber, which will be of inestimable benefit to all. You have my hearty approval of your plan and I trust it will prove most successful in every way.

Frederick H. Brennan, Secretary and Treasurer The N. K. Fairbank Company, Chicago.

The plan for the "Tree Planters of America," seems to us very well devised to accomplish the purpose in view. If the farmer boys of the country can be interested in the subject of reforestation, and be induced, from patriotic motives or obvious material advantages that will result to themselves, to plant trees upon the rough, waste or otherwise non-arable lands, there can be no question of the enormous benefit to the country from such a campaign.

PUBLIC OPINION

George H. Wilcox, President International Silver Company,
Meriden, Conn.

We are certainly interested in any plan that will look to increasing the forests of this country. We are doing what we can in our town, in a limited way, to encourage the planting of trees by the young men of our section, and we believe if we could get at more of them, that a little encouragement would perhaps produce very great results all over the country.

Edward P. Bailey, Manager The National Malleable Castings Company, Chicago.

I am in favor of any efficient plan having for its object the planting and cultivation of trees on a large scale.

A. S. Thomas, Meriden, Conn.

I commend the "Tree Planters of America."

Silas H. Burnham, President First National Bank of Lincoln,
Lincoln, Neb.

The plan of organizing the farmer boys of America for conservation and reforestation is, in my judgment, feasible and practical, and, if taken up by the boys in the true American spirit, will bring results that will astonish the nation. It will not only be of inestimable benefit to the country, but will awaken and arouse an exceedingly valuable idea in the minds of the rising generation.

Honorable John Barton Payne, Chicago.

I have read with great interest the pamphlet dealing with the subject, "The Tree Planters of America." The plan is admirable and should do great good in several directions. It should reforest the country and reinvigorate its youth.

G. H. Nye, President Cayuga County National Bank, Auburn, N. Y.

The idea of securing the interest of the youth of America in an organization with such a name is practical, and a very good one. It is assumed that the selection of trees would be such as to produce the best value at maturity. I have for some time advocated the planting of valuable trees along the roadside in all country towns, and any waste land whatever might well be devoted to such a purpose. Anything that makes play for the young boys should be, if possible, turned into producing something of practical value, as a result, and this idea is a most excellent one.

PUBLIC OPINION

Wilson H. Doe, Cashier The Home National Bank, Elgin, Illinois.

Relative to the proposed organization of "Tree Planters of America," the object to be gained by this organization appeals to any right-thinking man. If that can be accomplished, the good which will result will be incalculable, and of benefit to the Nation for all time to come.

Honorable Frank O. Lowden, Member of Congress from Illinois,
Sinnissippi Farm, Oregon, Ill.

I have read, with much interest, your pamphlet entitled the "Tree Planters of America." I think this method proposed by you is eminently practical, and I wish you all success. It is idle to expect to accomplish everything by legislation. The people themselves must do their part if we are to make real progress.

I wish to suggest, for your consideration, the desirability of having the several States exempt from taxation lands that are devoted to forestry. It takes so long to raise the first crop of timber that the State might well assist by exempting property of this kind from taxation while it is growing.

Honorable Edwin Warfield, formerly Governor of Maryland,
Baltimore.

Concerning the "Tree Planters of America," I think your plan of organization is a good one. I am a farmer and very much interested in reforestation. I have a son who has become interested also, and we frequently discuss methods for restoring the forests on our plantation. I take great interest in tree culture, and am starting a private nursery. On every occasion that presents itself, I recommend to neighboring farmers the importance of looking after their wood lots, and whenever it is necessary to cut a tree for use, to replace it by planting another. Your plan is one that will be for the practical and permanent betterment of landowners and the people of the country.

Charles P. Mosher, Mosher, Griswold & Company, Auburn, N. Y.

I can think of but one answer for any man to make to the proposition, and that is, one of commendation.

Mahlon D. Thatcher, President First National Bank, Pueblo, Colo.

Concerning the plan to reforest the country through an organization of farmer boys and youth, to be known as the "Tree Planters of America," I heartily recommend the proposed organization, as I think it is a most desirable thing for the whole country.

PUBLIC OPINION

Charles T. Page, President Page Belting Company, Concord, N. H.

The plan of the organization to be known as the "Tree Planters of America" has my hearty approval. This organization will be an effective instrument for the promotion of the cause of reforestation.

John D. Hibbard, President North American Securities Company, Chicago.

Concerning the "Tree Planters of America," I believe the idea an extremely valuable one. If ways and means can be found to interest the "boys," and the plan can be made effective, nothing but good can result, the measure of which no one at this time can state.

E. O. Painter, Jacksonville, Florida.

I am heartily in interest with an Association of Farmers or Boys that will help renew the forests of our country. We need it in this State, especially as large areas of land are being cleared of timber by the saw-mills. Only a small portion of this land is taken up for cultivation. Of course, a small growth of pine and oak followed, but it will be a long time before such growth will be available for use.

John M. Nelson, Hambleton & Company, Baltimore, Md.

I am much interested in your wise and practical plan for interesting the boys of the United States in planting and caring for trees. An organization, such as is proposed by The National Business League of America, to reforest the country, must appeal to everyone who has given any thought to the vital importance of this subject.

Honorable James O. Davidson, Governor of Wisconsin.
Madison, November 14, 1910.

I am in receipt of your pamphlet suggestive of a plan to reforest the country through an organization of farmer boys and youth, to be known as the "Tree Planters of America."

I approve most heartily of the plan you have worked out. The fact that you propose to interest the children is the strongest evidence that the project has breadth and proposes to meet the necessities of the situation.

Wisconsin feels keenly the need of doing a work such as you propose. We have not yet outlined a comprehensive plan for it, but are endeavoring to do something through the agency of the State. I have no doubt that Mr. McGovern, who will become Governor of the State the first of January, will give every assistance that he will be able to in his official capacity.

Personally, in whatever position the future may place me, I shall be glad to give such help as I can to the movement.

PUBLIC OPINION

John S. McLain, Editor-in-Chief Dispatch and Pioneer Press,
St. Paul, Minn.

The proposition to interest the boys of the country, particularly of the rural districts, in tree planting appeals to me as not only an excellent idea but a very practical one. In this State we have made considerable progress in the way of agricultural education, and have developed an interest in the rural communities in everything which makes for the betterment of country life. I think your plan would meet with a very hearty reception in this State.

Maurice H. Newmark, M. A. Newmark & Company, Los Angeles,
Cal.

Relative to "The Tree planters of America," the remedy that you suggest, to reforest, through the instrumentality of the farmer boys of America, must meet with the hearty approval of the people of this broad commonwealth. Reforestation is one of the prime necessities of the present day, and, when, at the same time, you educate the farmer youth of the country, you are compounding a beneficent act—"killing two birds with one stone"—and doing a tremendous amount of good for the future.

Honorable William J. Bryan, Editor and Proprietor "The Commoner," Lincoln, Neb.

I am pleased with the plan you outline for "The Tree Planters of America." It will do the boys good to enlist in so worthy a cause, and the country will profit by the enthusiasm aroused in forestry.

I. J. Truman, President Truman Investment Company, San
Francisco.

The idea is an excellent one and should be encouraged, as our wood supply should be kept up in some way, and the suggestion in your pamphlet would accomplish much.

On every farm there are corners and waste places which could be supplied with trees to the great benefit of the planters and also to the parties who may come after them. In this State there are vast acres of land which could be planted to trees which would supply fuel for a large portion of the population.

W. C. Patterson, Vice-President First National Bank of Los
Angeles, Los Angeles, Cal.

The scheme for reforestation of the country through the organization of the farmer boys and youth of America is certainly novel and attractive, and is one in which I believe the boys would enter with zest and enthusiasm. I know of no more important problems than those of conserving the forests which now exist, and reclaiming the districts which have been denuded.

PUBLIC OPINION

A. G. Sherry, F. W. Edgerton Company, Troy, N. Y.

I am in full accord with the plans for the "Tree Planters of America." Get the rising generation started right, and "When they are old they will not depart from it."

For years I have wondered why hundreds of the steep hillsides in this part of the country were not, long ago, planted with trees. They are so steep the grass dries quickly, and they are of very small value for pasturage and are good for nothing else.

You have struck the right idea, and I hope you will have great success. Along with this teach the young ideas to respect trees and grass planted in cities and towns. They are very prone to destroy these.

Frederick S. Fish, First Vice-President and Chairman Executive Committee, The Studebaker Corporation, South Bend, Ind.

Relative to the suggestion of a plan to reforest the country, through an organization of farmer boys and youth, to be known as the "Tree Planters of America." it seems to me if it can be organized along the lines as suggested, it is not only practicable, but it will be a rational and successful way of solving the problem.

Arthur Young, Arthur Young & Company, Chicago.

I have been much interested in reading the pamphlet suggesting a plan to reforest the country through an organization of farmer boys, to be known as "The Tree Planters of America."

Such a plan cannot fail to meet the hearty approval of everyone that has at all considered the subject. It will be a good thing for the farmer boys. If it is under the efficient direction that is proposed, it should be a great thing for the conservation of the country's resources.

John Marsellus, President John Marsellus Manufacturing Company, Syracuse, N. Y.

In our opinion the people of the United States, after unaccountable and lamentable neglect, are at the present time thoroughly united in demanding the protection of public interests, chief among which is the conservation of our forests. Carelessness and indifference are to be succeeded by practical as well as permanent efforts towards the rehabilitation of our timber supply. We heartily commend the organization, now suggested and being pushed by the National Business League of America, to be known as "The Tree Planters of America." It is our cherished hope that the youth of this country are to be inspired to thus provide lasting results against a lumber famine, as well as securing prevention against that prodigal destruction of national wealth which has characterized our history during recent years.

PUBLIC OPINION

Dr. Benjamin Ide Wheeler, President University of California, Berkeley, Cal.

I think your plan for the organization of the "Tree Planters of America" is a good one. Anything that can be done to interest our young people in trees and the planting thereof cannot be amiss.

Thomas P. Egan, President J. A. Fay & Egan Company, Cincinnati, Ohio.

We think your idea is great if any plan can be devised to reforest the country through an organization of the farmer boys. It would be the greatest benefit to this country that could be promulgated. We are in a position to know that the waste of the forests is actually 50 per cent. In other words, there is not 50 per cent of the actual lumber gotten out of the trees. In 90 per cent of the cases where saw-mill people cut over the ground they cut down both small and large and simply leave the small stuff to rot.

If, in addition to the reforestation of the country, you could devise some method of supervising the cutting of the timber it would be the greatest boon to this country. In other words, when they cut the large timber out of a large tract of land, to have a supervisor to save the small timber, and make them leave standing the stuff that they know cannot be used in the saw-mills. We offer this as a suggestion and hope you can make use of it, and we know it would be a great step in keeping the country forested as it should be.

George W. McKerrow, Superintendent Department of Farmers' Institutes, The University of Wisconsin, Madison, Wis.

Concerning "The Tree Planters of America," the work your organization has undertaken and outlined is a good one. You will find the Wisconsin Farmers' Institutes always ready to co-operate with you in any practical lines you may have to suggest for the forwarding of this work.

L. A. Ault, President The Ault & Wiborg Company, Cincinnati.

I am heartily in sympathy with the movement, and entirely approve of the plan.

E. H. Keeler, Secretary-Treasurer Rockford Lumber and Fuel Company, Rockford, Ill.

I have read with great interest the pamphlet, suggesting a plan to reforest the country through an organization of the "Tree Planters of America," and assure you that the plan meets with my enthusiastic approval. The American boy is quick to grasp a good idea, and if his interest is aroused I am sure good results would be accomplished.

PUBLIC OPINION

A. L. Martin, Director of Farmers' Institutes, Department of Agriculture, Harrisburg, Pa.

"The Tree Planters of America." This work gives to me a new inspiration for the development of better forestry conditions in the United States, and I cannot but commend the National Business League of America.

David S. Gray, Vice-President The Hayden-Clinton National Bank, Columbus, Ohio.

Referring to the suggestion of a plan to reforest the country, through an organization of farmer boys and youth, to be known as the "Tree Planters of America," I beg to say that I have carefully read the plan proposed and believe it to be not only practicable but highly desirable, and, if organized and put in operation on lines indicated, it would be effective in the accomplishment of the important end in view.

Edward J. Parker, President State Savings, Loan and Trust Company; President Illinois Outdoor Improvement Association, Quincy, Ill.

"The Tree Planters of America," I am glad the National Business League of America has taken up this matter, and in a very practical way. The intelligent and self-sacrificing work of the Honorable Gifford Pinchot and others in the matter of conservation and reforestation, should be supplemented with the co-operation, not only of other citizens, but of organizations, both municipal and state. The effort of a single citizen, namely, the Honorable Sterling Morton, has made Arbor Day a very practical matter in the country at large. Travelers over the transcontinental lines in this country and Canada, are surprised at the vast natural waste from cyclones, avalanches, fires, etc. Careless hunters, beginning with the aborigines have laid waste the forests of mountains and plains. It is thought by some scientists that the plains between the Missouri River and the Rocky Mountains were at one time covered with forests, and that they were burned by the Indians in their hunting expeditions.

In Japan, the permission of the state and municipal authorities must be obtained to cut timber, and, when it is cut, the forests are renewed by intelligent planting, as the traveler plainly observes. The old forest lands of China, Italy and Spain have been denuded, and the commerce and wealth of those countries are injuriously affected thereby. On the other hand, Germany has carried on the work of reforestation for generations, and it has been said that her planting has been done with reference to the ultimate exportation

PUBLIC OPINION

to this country of varieties of timber which we have destroyed by careless and thoughtless waste.

The plan of The National Business League to organize the "Tree Planters of America" is an excellent one. In some of our States, farmers' clubs and debating societies have been organized with reference to the conservation of the soil.

We should impress upon the farmers' boys, particularly, that their assistance and co-operation is needed in preserving and replanting our forests. The question is important enough also to be taken up by the combined educational influences of our country.

Henry F. Whitcomb, Milwaukee, Wis.

The plan outlined seems to me to be wholly practicable, and likely to bring good results if prosecuted vigorously and persistently.

J. C. Van Riper, President American Trust Company, St. Louis.

Concerning the "Tree Planters of America," I am greatly pleased at the interest shown in the proposed organization. Any plan of reforesting the country, I think, must be done on private property, therefore the suggested organization of the "Tree Planters of America" appeals to me as a practicable proposition.

When the other side of the question is considered, the growing of trees where waste places at present exist, and its effect on the coming generation, I cannot believe but that men, generally, will heartily and sincerely endorse your plan.

William Spencer, President The First National Bank of Erie,
Erie, Pa.

Your tree-planting scheme is a most excellent one and I predict a great success. It will be the first attempt to let the farmer boy feel a real interest in the national uplift, and to realize he is a factor in national affairs as well. It is high time the farmer boy was recognized.

Ezra J. Warner, Jr., Secretary Sprague, Warner & Company,
Chicago.

Concerning the plan to provide for the reforestation of this country by means of an organization of farmer boys and youths, to be known as the "Tree Planters of America," the writer cannot see how anyone can well dissent from the opinion that here is an excellent idea, and one, which, if worked out in the right way, will go far toward solving one of the most serious problems confronting this and coming generations.

PUBLIC OPINION

M. C. Rankin, Commissioner of Agriculture, Frankfort, Ky.

The principle of your plan to reforest the country is a good one. It will take a long and active campaign of education to have it universally adopted. Cordial best wishes for success.

E. P. Bacon, President E. P. Bacon Company, Milwaukee, Wis.

I have perused, with much interest, the pamphlet entitled, "The Tree Planters of America." The project of the formation of an organization of American boys for the purpose of promoting the reforestation of the country from year to year seems to me a thoroughly practical one, and I believe it will prove a most important instrumentality of accomplishing the purpose. I have seen some allusions to it in the daily press previously, and it seems to me it will contribute more largely towards the accomplishment of the desired result than any other single instrumentality that has come within my observation. I wish to congratulate you heartily on the initiation of the plan, the progress of which I shall observe with interest, and I sincerely hope it may be carried into effective operation throughout our entire country at an early period.

H. M. Kinney, General Manager Winona Wagon Company,
Winona, Minn.

I want to congratulate you upon devising a plan for reforestation that seems to me will do great things. If you stir up the ambition and pride of the farmers' boys of this country you will set in motion a force that in time will accomplish wonders.

Charles S. Burton, Cashier The State Bank of Utah, Salt Lake City.

I regard the suggestion as a most excellent one, and the proper solution of one of the most important problems the Nation has to solve.

L. H. Kittredge, President The Peerless Motor Car Company,
Cleveland, Ohio.

I have carefully read the pamphlet and approve most heartily of this movement.

J. G. Battelle, President The Columbus Iron and Steel Company,
Columbus, Ohio.

The plan for the organization of the "Tree Planters of America" seems to me practical, and if so, it certainly would prove immensely valuable for the permanent betterment of all the people.

PUBLIC OPINION

Honorable William M. O. Dawson, formerly Governor of West Virginia, Charleston, W. Va.

It appeals to me as a good move in a very desirable object. I wish the League every success in the effort to conserve our forests.

J. Ralston Cargill, General Manager Penick & Ford, Ltd.,
Columbus, Ga.

I have read with a great deal of interest and pleasure your pamphlet outlining a plan of organization for the "Tree Planters of America." The idea is an excellent one, and it appeals to me strongly as affording a definite and tangible working basis for the reforestation of the country. Volumes have been written and much has been said about "Conservation," and yet today many people have only a hazy idea of what conservation really is. It is in danger of becoming an empty phrase, as vain as "sounding brass and tinkling cymbals." *But your plan has a handle to grip to.*

I was an interested listener to the speeches of Mr. Pinchot and others recently at a banquet at The Piedmont Driving Club in Atlanta. The Southern Conservation Congress was in session, and I attended as the representative of The Columbus Board of Trade. The talks were all entertaining and instructive, but there was the lack of a definite working plan whereby tangible results might be gained.

On my recent trip through South Georgia and Florida I was struck by the enormous waste of forest land denuded of its yellow-pine growth. The turpentine and saw-mill interests have cut a wide swath through that section, and down there now they have the problem of reforestation, or digging up the stumps to prepare the land for agriculture or of allowing the land to remain idle—a dead investment—with soil erosion going on and depriving the land of its virgin fertility.

I was with Mr. Hardaway, of Hardaway, Fla., for a brief stay on his Columbus and Rosemeads sugar-cane and tobacco plantation, and he told me that he intended to plant three hundred acres of his land, of the kind just described, in pecan trees. This is being quite generally done by the more progressive planters and land owners in that section, and there is no doubt they will reap a rich harvest in the next decade as a result of their foresight. I think I would be safe in estimating that ten thousand acres of old pine tree land in South Georgia alone had been planted in pecans in the last few years.

I not only think your plan is practical, but, as a member from Georgia of your National Advisory Committee, I want to suggest that you form your first organization of a state group in this State. I am persuaded that the Governor, Commissioner of Agriculture and other officials would heartily co-operate, and I think, too, that you could rely on the assistance of the various Boards of Trade.

PUBLIC OPINION

Alexander H. Revell, President Alexander H. Revell & Company,
Chicago.

The more attention we pay now to preserving the forests of the Nation and to the planting of trees, the less attention we shall have to pay to other successes which we are anticipating in the coming fifty to a hundred years. Not that these other anticipated values in upbuilding shall be neglected. Perish the thought.

We should care for the forests and plant the trees, not only for the money value, but also for the valuable sentimental side. Each of these values can easily be estimated at hundreds, perhaps thousands of millions of dollars, as the years go by.

Wesley Webb, Corresponding Secretary The State Board of
Agriculture, Dover, Del.

I most heartily and cordially approve the plan to reforest the country through an organization of farmer boys and youth, to be known as the "Tree Planters of America."

Honorable George C. Pardee, formerly Governor of California,
Oakland, Cal.

If the farmers' boys and youths can be interested in the matter of reforestation, the thing is done. It is, I am sure, a good way to get at the matter, which is of so much importance, not only to the farmers, but also to every other American citizen. I sincerely hope your plan will be effective.

Arthur H. Devers, Closset & Devers, Portland, Oregon.

The plan suggested is an excellent one, and with careful work on the part of the League, should be productive of wonderfully good results.

George R. Brown, Secretary Board of Trade, Little Rock, Ark.

There is ample work to do in this State in tree planting. Trees should be planted along the country roads; old fields should be protected by forests; the mountain section of the State should be prevented from washing; gullies can be prevented, streets improved, etc. Our river bottoms could be made prolific with the cultivation of pecans, while a great industry in basket-making could be built up by securing willows.

William P. Ketcham, Seattle, Wash.

I have been in perfect accord with the progress and work in this very important channel of reforestation, and I find that it is hailed among practical people with whom I have talked since I reached the coast, as the most business-like and simple project of reforestation that has been offered up to this time.

PUBLIC OPINION

J. A. Jeffrey, President The Jeffrey Manufacturing Company,
Columbus, Ohio.

I cordially endorse the suggestion of the "Tree Planters of America." Such a movement would be worth a great deal to the Nation in forest preservation and reforestation of our country. The great benefits which our boys and the coming men would receive through such training and education would more than pay any expense and efforts that may be put forth. I most heartily commend the movement.

H. R. Groff, Manager Childs-Groff Shoe Company, Cleveland, O.

The "Tree Planters of America," well organized by men who know and love boys and trees, cannot help but make its impress on the next generation for the good of all the country and its people. The idea is a fine one.

N. E. Shaw, Department of Agriculture, Columbus, O.

The plan suggested seems to me to be a good one. The hope of accomplishing anything along this line depends upon interesting the rising generation in this work. Although nearly all thinking men realize the importance of tree planting and forest preservation, it is difficult to induce them to undertake practical work, because they do not expect to see definite results accomplished. It seems, therefore, that your plan of interesting the boys of America in this movement is a step in the right direction.

Dr. Francis P. Venable, President University of North Carolina,
Chapel Hill, N. C.

I feel great interest in the "Tree Planters of America." I realize how much it means to the people of the United States and shall be glad to do anything in my power to aid in the movement.

Honorable George W. Dixon, Vice-President Arthur Dixon
Transfer Company, Chicago.

It must be evident to every man familiar with the vast inroads on the forests of the United States that only a persistent and widespread movement can restore that which, often with wasteful methods, is being rapidly consumed by the industries of the country.

As a remedial proposition the suggestion of an organization of farmer boys and youth, as the "Tree Planters of America," appeals to me as clearly being the effective means of restoring our forests, and at the same time becoming a powerful factor in conserving the rain-falls and water-powers of the Nation.

PUBLIC OPINION

Honorable Robert S. Conklin, Commissioner of Forestry, Pennsylvania Department of Forestry, Harrisburg, Pa.

Regarding an organization for reforesting the country, to be accomplished by the "Tree Planters of America," I believe if the plan can be carried out that it will be the means of stimulating interest in our tree-planting problems. This department is heartily in accord with any organization which will assist in doing this work. Should the tree planters' organization become popular, which it undoubtedly will under the plan you suggest, I see no reason why its influence should not extend throughout the Nation.

Forbes Lindsay, New York City.

The plan outlined in the "Tree Planters of America" excites my hearty sympathy. It is admirable, no less on account of its simplicity than for its unquestionable effectiveness. It goes directly to the root of the matter by providing for general reforestation by the creation of innumerable wood lots. If the trees of the future are largely in private ownership the destructive exploitation of timber will be minimized.

Your project is quite practical and I believe that it will be successful, because the proposition is one calculated to appeal to our farmers' boys if attractively presented, but the outcome must depend largely upon the manner in which the details are designed and carried out.

Honorable Edgar E. Ring, Forest Commissioner, State of Maine, Augusta, Me.

Anything that can be done to awaken an interest in the boys of this country as to the very great importance of the proper conservation of our great forest wealth, would certainly do much towards perpetuating our forests. In my opinion, the way to do this is to get them interested. I think your plan is worth trying.

George S. Brooke, President The Fidelity National Bank, Spokane, Wash.

I believe the proposed plan is an excellent one and cannot fail to bring good results.

Ellsworth Regenstein, State Superintendent, Department of Education, Frankfort, Ky.

I have carefully examined the pamphlet suggesting the plan to reforest the country through an organization of farmer boys and youth. It appears to me that the "Tree Planters of America" should accomplish wonders, provided they have proper organization and guidance. The plan appears to be very feasible and I give it my hearty commendation.

PUBLIC OPINION

E. C. Bishop, Superintendent, Department of Public Instruction,
State of Nebraska, Lincoln.

Concerning the "Tree Planters of America," I am very much interested in the work, and shall be glad to encourage it wherever I can. I would like especially to have it adapted in some way so that our boys' and girls' clubs, through the public schools, may become interested. We have in this State about 32,000 young people organized into boys' and girls' clubs. I would like to give them the "Tree Planters' Idea" and help extend the work through the public schools.

Colonel Robert J. Lowry, President Lowry National Bank,
Atlanta, Ga.

I know of no question before our thinking people today that is of greater importance than the question of conservation of our resources, and the most important branch of that subject is the question of the re-establishment and maintenance of our forests.

This being a new country, so to speak, we have been disposed in the past to be lavish in using resources in its rapid development. We have magnificent cities, but some of them exist at the expense of natural resources of the section surrounding them. Pursuant to the demand for the very best quality of everything, much good stock is thrown away that might serve a less æsthetic taste with perfect satisfaction. It has been said that every family in the United States wastes enough to feed another one, and the products of our mines and forests have not been properly conserved in the past.

We should bring ourselves to a realization of the fact that we are not the only people who are to occupy this soil, and that it is the duty of every generation to conserve and preserve and propagate resources for the use and benefit of succeeding generations. We should teach our boys that wastefulness sooner or later brings want, and that all their acts should be constructive instead of destructive. Future generations will need our forests, and, as we utilize virgin resources at hand, we should replace these, where possible, that succeeding generations may not only have as good a basis of commerce as we have enjoyed, but that their supply may be greater to meet the demands of the increased population.

I especially commend the efforts of the League along the line of reforestation of the United States. It is a burning question of great importance, and particularly does it concern those to come after us. The little pamphlet, "The Tree Planters of America," I have perused with a great deal of pleasure, and it is just such effective literature as this that will bring before "Young America" the necessity of the daily practice of conservation.

PUBLIC OPINION

A. B. Farquhar, President A. B. Farquhar Company, Limited,
York, Pa.

The plan of interesting the youth of the country in forest culture and preservation is certainly an admirable one. Since trees planted will only be of value to the next generation, they must certainly see that our action is altruistic—all for their benefit. The plan unquestionably appeals to me as practical, and is entitled to all possible encouragement and assistance. I believe it will succeed.

Professor John H. Gray, Department of Economics and Political
Science, University of Minnesota, Minneapolis.

I am delighted with the proposition for the "Tree Planters of America," and am glad to know that the League is taking this matter up. It seems to me that this is one more strong element back of the movement for conservation, as well as for education. The two seem to me vitally connected.

La Verne W. Noyes, President Aermotor Company, Chicago.

It seems a very practical way of accomplishing the purposes of beautifying and benefiting our country and utilizing its waste places. I hope the plan will succeed and will do anything I can, personally, to forward the movement.

Herman A. Hertel, Pasadena, Cal.

I am heartily in favor of forming an organization to be known as the "Tree Planters of America." The benefit to future generations, if the idea is carried out, can hardly be overestimated.

James W. Nye, Manager Chicago Laboratory, Chicago.

From rather frequent visits to the semi-arid portions of the United States, and also to the semi-arid portions of Mexico, I can appreciate the absolute necessity for reforestation in many localities.

It appears to me that the "Tree Planters of America" afford a very possible solution of the necessities of sections with either a scant or an irregular rainfall. If the active support of the boys in the United States is secured they can do the necessary work, thus adding many millions to the value of the lands now practically useless.

R. H. Downman, President Bowie, Des Allemands, and other
Lumber Companies, New Orleans.

Relative to the proposed organization of an association to be known as the "Tree Planters of America." I have read the prospectus of this work with a great deal of gratification, as I feel that it is, unquestionably, a step in the right direction, and every one who is at least interested in the future of America should lend every possible aid to the development of this good work.

PUBLIC OPINION

R. A. Long, President The Long-Bell Lumber Company, Kansas City, Mo.

The plan appeals to me as most practical, and I believe if put into effect will create an interest on the part of the boys of our land in the subject that otherwise they would not give consideration, and, besides, I believe such a movement will inspire patriotism, and hence I shall be very glad indeed to see it made effective.

Luther Burbank, Santa Rosa, Cal.

I am heartily in sympathy in having the children learn the value of trees, how to grow them, their names, habits and qualities, and I think the plan which you have laid out is of great importance; more to the children than can be estimated just now. On the care of the trees depends their prosperity in the future, so not only for their own benefit in preserving and increasing the forests and wood and timber supply, but the discipline which they will receive in compensation for their interest, will a thousand times repay them.

Edwin Chamberlain, Vice-President The San Antonio Loan and Trust Company, San Antonio, Texas.

The tree-planting movement promises to be of incalculable benefit to the country, for various reasons.

It is along the line of reforestation so extensively carried out in Europe and Asia, under the British regime, with the added advantage here, that instead of a service of paid forest rangers and foresters, this would enlist the membership and activities of practically the whole rural population—and it need not be limited necessarily to the rural.

From the conservation standpoint, the idea is a very grandly useful one. But, even deeper and farther than the line of economic industrial value, through the asset of the trees themselves, goes the benefit to be derived from the effect of this training on the characters of the young, our future citizens; give a boy something to do that he can accomplish "all by himself;" inspire him with the spirit of creating, instead of that of destruction; endow him with a sense of responsibility; make him feel that he is doing a thing which will benefit, not merely himself and his associates, but all future humanity; give him to understand that he is doing his part—"pushing his pound"—towards the welfare of his country, and you have laid the foundations for a pretty good and useful citizenship.

PUBLIC OPINION

R. W. Douglas, Secretary Washington Conservation Association;
Washington State Commission on Forest Legislation, Seattle,

The plan as outlined for the "Tree Planters of America" is an excellent one, and when carried out—as it can be with a very moderate expenditure of time and money—will yield results vastly benefiting the Nation, from an æsthetic as well as a practical standpoint.

Frederic W. Upham, Upham & Agler; President City Fuel Company, Chicago.

The suggestion of an organization of farmer boys and youth, to be known as the "Tree Planters of America," appeals to me as a thoroughly practical plan for the restoration and conservation of the forests of the United States. Every farmer should make his woodland a profitable part of his farm. Millions of trees, large and small, are rotting on the farms all over this country today. The ravages of parasites also destroy much valuable timber. Here is a field of patriotic effort and usefulness for the boys of America. The movement has my cordial approval.

Honorable Marion E. Hay, Governor of Washington, Olympia,
Wash.

Concerning the pamphlet issued by The National Business League of America, which sets forth the purpose of that association to interest the boys and young men of this country in an organization to be known as the "Tree Planters of America," the idea seems feasible, and if such an organization is perfected, it will prove a long step forward in practical conservation. The plan should appeal forcibly to every patriotic American, and I stand ready to lend what aid I can to the movement in this State.

Charles B. Boothe, President, The National Irrigation Association,
Los Angeles, Cal.

The Tree Planters' Association will exert a tremendous force for good in the communities throughout the United States where the organization may be established.

Not only that the planting of trees is a desirable and useful thing, but it will develop in every boy connected with the organization a greater patriotism and through the Association, all boys working together for a common end, a greater sense of universal brotherhood.

PUBLIC OPINION

Honorable Raymond A. Pearson, Commissioner, Department of Agriculture, State of New York, Albany.

I believe all citizens should be interested in the reforestation of the United States, and of course, particularly so relative to the important subject in the State of New York. The idea of interesting boys of this generation in such subjects appeals to me. We must depend upon the education of the young along the lines of improved agriculture and tree planting to restore to the next generation better conditions than existed during our time.

Charles E. Thorne, Director, Ohio Agricultural Experiment Station, Wooster, Ohio.

The plan proposed seems to me to possess much merit. It will certainly be well worth trying through the rural schools of the country.

Honorable Champ Clark, Speaker of the House of Representatives, Washington, D. C.

I think it is an admirable idea to have an organization or association of farmer boys known as the Tree Planters of America.

Edwin A. Start, Secretary, The American Forestry Association, Washington, D. C.

I can assure you of the cordial interest of the American Forestry Association in your splendid project and its willingness to do anything it can to promote its success.

Edmund S. Hoch, Secretary-Manager, The Automatic Recording Safe Company, Chicago.

Again, the National Business League is earning the congratulations of the American public and placing the country under further obligations to its good service.

Of the great national movements that the League has inaugurated, not excluding the organization of our National Department of Commerce and Labor, "The Tree Planters of America" will appeal to many as the most important.

The character of the organization of this proposed great national body and its plan of procedure give it special interest and

PUBLIC OPINION

will undoubtedly insure its prompt and sound success. The farmer boy and the tree are natural companions and a movement to connect the two in a great systematic national reforestation program proceeds from a natural base.

The increasing value and scarcity of trees will help in impressing the mind of the present and future farmer boy with the need for their preservation and restoration, at which practical first result the movement is aimed.

I cannot see how this plan will meet with anything except support at the hands of all—government representatives, officials, public bodies and individuals, everywhere. Some such organized general movement is due and is wanted to unify the scattered and rather sporadic efforts toward reforestation which have for some time been put forth in various parts of the country—so far with local or indifferent success.

If I were asked to suggest an auxiliary feature to the League's plan, I would recommend that the "Tree Planters" include the boys of towns and smaller cities, who might be interested in a special movement looking to the planting of desirable and adaptable foliage trees, along the streets of their villages and cities, for shade and ornament.

Our wealth in foliage trees has never been properly appreciated or developed. Our forests, in every zone, abound in a great variety of splendid foliage trees, many of them of the blooming variety, such as the chestnut, catalpa, linden, locust, magnolia, etc., which cultivation would greatly improve.

Our towns do not at all adequately avail of the opportunities which profusely surround them and which, if half improved, would make almost any otherwise ugly faced village a charming place of abode. For the beauty, freshness and purity of trees influence humans about them—they spread refinement, which is shortly written all over the lineaments of the town or the street they inhabit.

The fame of Paris as a city of beauty is traceable in no small degree to the glory of its blooming chestnuts, pink and white, in the spring. A drive over the Champs Elysees to the Bois, in May, is near to a glimpse of Paradise, made so by the splendid trees which line it and the color and fragrance of their luxuriant blossoms.

In our larger cities the baseball parks afford a splendid opportunity for tree planting. The average city baseball park is a desolate place, its physical aspect coarse and ugly—in many cases almost brutalizing. Trees would radically change this, and would make the sport finer and the enjoyment for all fuller and higher.

Who does not recall, with the recollection of great games upon

PUBLIC OPINION

the college or university campus, the inspiration associated with its background of deep green trees, glinting in the sun and bending in the breeze? What splendid impulses rise from such surroundings. There is something in the heart which swells in response to the soft rustle of the leaves of a noble tree, as its branches swing gently in the wind—response to a message directed to the deeper and truer sources of being, where are generated the subtle philosophies and resolves that make men clean and strong.

Much is said to us about guardian angels, in our youth. A good tree, with its rich fresh tones of green, its cooling shade and its atmosphere of rest and solace, is a fairly good substitute for a guardian angel, to the grown-up man, especially to the modern city man, stifled by the heat and smoke of the town and seared by its blight of brick and stone.

Your reforestation movement will indeed mean much to the future generations of Americans.

Frederick Weyerhaeuser, St. Paul, Minnesota.

Concerning the "Tree Planters of America," I fully endorse the object of your proposition.

While it is true that we are using up our timber resources rapidly, as soon as there is a sane system of taxation of timber lands and adequate protection from fire, private timber owners will begin to practice forestry, and eventually the consumption of lumber will be in proportion to its growth. This will accompany and be in proportion to the increase in the value of timber lands. The history of European forestry is repeating itself in America. Your plan is to be commended.

Honorable John D. Works, United States Senator from California, Washington, D. C.

The question of reforestation is a very important one in our state. Any active effort to create sentiment in its favor and to make that sentiment practically effective by doing something as well as talking about it, appeals to me very strongly. Your organization, "The Tree Planters of America," should, and, I have no doubt, will, serve both these purposes. It will teach the youth of the country to appreciate the importance of protecting the forests we have and the growth of others, and make these young people militant workers for reforestation. You have my earnest sympathy in your efforts in this direction.

PUBLIC OPINION

Honorable George P. McLean, United States Senator from Connecticut, Chairman Committee on Forest Reservations and the Protection of Game, Washington, D. C.

I am in hearty sympathy with the purposes of the "Tree Planters." The effort to renew our forests should be sustained wherever possible.

Honorable Robert L. Taylor, Member of Congress from Tennessee, Washington, D. C.

I am much taken with the proposal to organize the boys of the country into "Tree Planters." It is a most fortunate thought for there is nothing like a boy's enthusiasm when it is aroused, and they will seize upon it and push it with avidity, and you will have the basis of reforestation established almost before you know it. I know something of this from some connection with boys' corn clubs. It is remarkable with what enthusiasm and intelligence they have seized upon this.

I see but one difficulty, but there are ways to overcome that. A boy likes to see things happen quickly, and a tree is a long time coming, and so your plan must devise something that will interest him as quickly as possible in its results. I suppose, however, that note has been taken of all this. I most heartily commend it, and expect to see it accomplish great good.

Robert J. Thompson, American Consul at Hanover, Germany.

I have read with interest the proposal of the League, looking to the reforestation of the United States by organizing the boys of the country in a national body or society to be known as the "Tree Planters of America."

I congratulate you on this timely movement, and especially upon the practical plan outlined, and which includes, as a corollary of the work of reforestation, the "Physical, moral and spiritual uplifting of the American boy" and future generations.

The trees of any land are a good insurance of its sound prosperity and of the solid character of its people. The moral influence of their presence is positive and unquestioned, while their material value as the basic asset of a nation would be difficult to overestimate.

They certainly represent the least expensive crop insurance a country may provide, as they retain in the earth the moisture of the

PUBLIC OPINION

down-pouring rains and of the melting snows, holding their flow in moderate check, to more steadily disseminate their life-giving strength through the soil—transforming it into the abundance of nature.

Trees are the *natural* irrigators, as well as the fertilizers of our soil. Not only do they serve to store and seasonably distribute our annual rain and snow fall, but by the maintenance of great permanent moist areas, they continue and increase it.

Note the increase of rainfall following planting of trees on our great prairies—even in our former deserts. Then note the recurring drouths which have repeatedly withered naturally fertile regions, since our great forests have been denuded. Likewise, the devastating spring floods—precious waters wasted—and the far south-reaching frosts and blizzards, which almost yearly come upon us since the life-saving barriers of our tree-clad slopes have been cut away.

Just as the human being does not begin to appreciate the vital value of his health until serious inroads have been made upon it, so a nation does not awaken to a realization of the vital need of its trees until they have largely disappeared.

Fortunately, the trees can be replaced—if a proper system of planting be inaugurated and steadfastly prosecuted. As a fundamental, far-reaching and effective move in this direction, your plan of reforestation through the co-operation of the American farmer boys is to be commended, and your efforts in this direction should have the active support of every intelligent citizen.

Anyone who has lived or traveled abroad must have been impressed with the extensive reforestation work that is going on in the various countries of Europe, and especially with the vital importance that is attached to its progress.

Forestation under control of the Prussian authorities and belonging to the public, nets the Government over \$20,000,000 annually. Prussia is only twice the size of Missouri, yet it supports 40,000,000 people. Its forestation is principally on mountain ridges, swamp land and sandy marshes, which are given over to the cultivation of pine, beech and oak. This revenue would pay for two magnificent Dreadnoughts a year, and in addition support Germany's diplomatic and consular service. Such possibilities, if Germany's forestation scheme were applied to America, would justify the organization of the "Tree Planters of America" a thousand times over.

But, further: In the province of Hanover, a part of Prussia, there are 7,000 miles of country roads bordered with fruit trees—apples, pears, cherries and plums—over 450,000 planted and culti-

PUBLIC OPINION

vated by the state, and not classed as forestation, but belonging to the road department. These trees yield in revenue, by actual sales of the fruit, twenty cents per tree, or nearly \$100,000 a year, which is applied to the maintenance of the roads.

To one sharing knowledge of these beauties and economic advantages to a people, the "Tree Planters of America" naturally appeals in the strongest sense. The National Business League of America has gone to the very fountain head of public sentiment, and no one who loves his country and is interested in its future can but wish the League the greatest success.

The forests of a land are indeed almost, if not actually, the father of its waters, which places them in first relationship to its life.

OPINIONS OF THE PRESS

THE CHICAGO RECORD-HERALD

There is a plan on foot to bring the boys and young men of the country districts into a comprehensive organization of "tree planters," whose energies shall go to replacing in some measure the forests that fire and the ax are laying low. The working out of the idea ought to be good for the boys and good for the country.

THE TROY (N. Y.) RECORD

The plan is to enroll the lads in the rural regions in an army whose desire will be to plant the waste places with proper trees; line ravines with timber; put out ornamental shrubs on the lawns, and replace timber which is cut with young growth. In this way it is believed a custom will be started, which will become a fixed part of the farmer's life and which will save the land from denudation.

This is a splendid idea and deserves success. It should spread beyond the farm to the suburbs of cities and even to the cities themselves. A sapling is easily planted and in a few years becomes a sturdy tree, valuable, ornamental and useful. If such a national association be organized, it will have accomplished as much for the future generations as any of the agencies now engaged in conserving the natural resources of the country.

OPINIONS OF THE PRESS

LEAVENWORTH (KANSAS) TIMES

It was the Laird of Dumbiedykes who, when he came into what was practically a treeless estate, determined to accomplish its reforestation. He supplied himself with desirable seedlings, and, as he went about his lands, he was "aye stickin-in," as a matter of habit, and it is recorded that they flourished exceedingly, and he handed down to his descendants a valuable wooded estate.

If the farmer boys of this country can, through intelligently directed organization, be induced to acquire the habit of "aye stickin-in" a valuable seedling tree at the right place and time, more would be done in the way of timber restoration in half a century than has been accomplished by scientific reforestation efforts in a like period.

THE REPUBLICAN, SALT LAKE CITY, UTAH

The plan is entirely practical and possesses great merit, for reared in the practice of tree planting, conservation of the timber supply, and schooled in the science of forestry, the habit will become fixed for life, and the custom of tree planting will have been extended to all parts of the United States, and all the farmers will be practical foresters.

For some years the public schools in the cities have been observing Arbor Day, and an effort has been made to interest the children of all ages in the planting of trees. But the opportunities for tree planting in the cities are limited. With the country boys organized a much greater amount of good can be accomplished.

ARGUS-LEADER, SIOUX FALLS, S. D.

"Reforestation by the farmer boys of America" would be the battle cry, and while the work was in progress, the country would be educating the coming generation in the importance of tree culture, the best trees to be grown, and the best ways to grow them, as well as how to fight the parasites which attack the growing trees.

COLUMBUS (OHIO) DISPATCH

Perhaps it has come as a fulfillment of the dream of the late Professor William James of a project that would claim and employ the militant spirit in something better than war.

THE NEWS, SALT LAKE CITY, UTAH

There is no doubt that it is a good idea to take up the work of forestation in a systematic manner. Vegetation means so much to a country. Animal life could not exist without vegetation. It is the beginning and foundation of higher forms of life.

In the canyons of Utah and in other suitable places trees ought to be planted, and if an organization with state, or government,

OPINIONS OF THE PRESS

aid could see to it, it would be done. More vegetation would mean more rain and better crops. Tree planting would give the boys the best and most useful occupation. It would draw them nearer to nature, and the beauties of nature. By all means let there be a tree planters' association.

PLAIN DEALER, CLEVELAND, OHIO

The rural youth of the United States would be bound together for the promotion of an interest upon whose success much of the nation's future prosperity depends.

This looks like a splendid extension of the Arbor Day idea. Boys enjoy organization and would, it is believed, take hold of such a movement as this with avidity. Tree culture would become a pleasure and timber of untold value might owe its existence to the inspiration that comes of fellowship in a good cause.

NEWS-TRIBUNE, DETROIT, MICH.

It is a movement to be commended, in that it conserves two natural resources—the BOY and the TREES. When boys and trees are good comrades, nothing is to be feared for either of them.

THE GAZETTE, TRENTON, N. J.

The idea is one that has its appeal not only to the farmer boys, but to the entire communities that have been denuded of their forest growth by fire, by the hand of the spoiler, or by the myriad legitimate uses to which timber is constantly put.

PITTSBURG (PA.) POST

This suggestion carried to a conclusion would probably do more to solve the problem of trees in this country than any other movement. It is a broad, practical and promising recommendation.

The land owners of the future would not only be educated in the value of trees and in how to promote their growth, but would witness trees of their own planting maturing as the boys developed into the responsibilities of citizenship.

THE NEWS, BUFFALO, N. Y.

Tree Planters Cheered

The National Business League has issued a pamphlet in behalf of the "Tree Planters of America," to be organized for the purpose of reforesting where that is needed and to encourage the intelligent growth of opinion and of action on that subject. No doubt there is a profound wisdom in the injunction that boys should be taught

OPINIONS OF THE PRESS

that which they shall practice when they become men; so should girls be taught that which they should practice when they become women. It is a good sign of the times that many employ their leisure, their command of their own time, in educational work that is inspiring and useful in about the same degree.

Many think that the salvation of the country depends on the expansion of the boy scout idea, which is no doubt, well enough in its way, though the tendency of our country has always been away from militarism for daily use, but all will agree, without exception, that training children to appreciate the value and the vital need of a proper proportion of forests to other lands, is a work in which there is all good and no evil in itself.

It is, however, particularly desirable that boys should be taught to have regard for trees and to be active in their preservation until large enough to grow. The reason is that boys are more apt than girls to be careless in such things when they become men in charge of public affairs. The carelessness of youth is apt to be continued with consequences that are damaging beyond calculation to the commonwealth.

Every such good work as that of tree planting should have every reasonable encouragement on the part of citizens. Much more can be done by an energetic and enlightened public opinion acting upon citizens than by mere appeal to the Government to resort to taxation, and through that highly expensive method to reach an end greatly desired.

THE COURIER-JOURNAL, LOUISVILLE, KENTUCKY

The National Business League of America, with headquarters in Chicago, is trying to interest the farmer boys of the United States in the reforestation of the country. To that end, it is proposed to form an organization to be known as the "Tree Planters of America." It is designed to push the movement largely through the co-operation of farmers' institutes, unions, societies and State and local associations.

Once the organization is effected with State, county and township groups, it would be expected to bring about systematic tree planting in "profitless pastures, nooks, ravines; on useless or worn-out spots or partly denuded forest acres on the farm, and in every place where the soil is not yielding a reasonable contribution to the general welfare." These forestry enterprises would be visited from time to time by experts from the United States forest service, and there would be systematic effort through these visits and by publications, to instruct the "Tree Planters" in all the branches of scientific tree culture.

OPINIONS OF THE PRESS

This is a good plan for inducing general interest in the subject of forest preservation and perpetuation. It is really an elaboration of the Arbor Day which is observed by the children of the public schools. It is a better plan, of course, for, if carried out as its promoters suggest, every day would be Arbor Day, and the ultimate results would be a future timber supply, which, by proper methods of conservation, might be maintained indefinitely.

There can be no enduring forestation movement without the co-operation of the youth of the country. The boys of today are to be the future directors of the destiny of the Nation. Unless they and their succeeding generations can be induced to enlist in the work of conservation that work is certain to fail. The suggestion of The National Business League of America is sensible and practical. By all means let the League proceed with the organization of its Tree Planters.

THE PRESS, GRAND RAPIDS, MICH.

If the nation is to be saved from a timber famine years hence, it must be by reforestation and a general effort such as this should prove extremely valuable. It is an extension of the Arbor Day idea, but differs in that it aims to teach children the proper care, as well as the planting, of trees. As the entire movement of conservation and reforestation is for the benefit of posterity it is proper that those who will reap the rewards be associated with the work.

The project, however, is broad and practical enough to enlist the attention of adults. In Michigan, for instance, men with small capital and desirous of a safe method of investment hardly could do better than buy waste land at the prevailing reasonable prices and reforest it. The outlay required is small and in twenty years or less they could begin to realize. The reforestation suggestion is particularly applicable to this State, where thousands of acres of denuded pine lands are to be had for small sums.

THE DEMOCRAT, JOHNSTOWN, PA.

The Tree Planters

The plan is to enroll the boys in the rural regions in an army whose desire will be to plant the waste places with proper trees, line ravines with timber, put out ornamental shrubs on the lawns, and replace timber which is cut with young growth. In this way it is believed a custom will be started which will become a fixed part of the farmer's life and will go far towards saving the land from denudation. There is no reason why the idea should be confined to the farms, though it must find its greatest opportunities there. In the villages and suburbs of the cities there is plenty of room for its

OPINIONS OF THE PRESS

demonstration. And, besides being a factor in the reforestation of the country, it ought to be a factor in the upbuilding of good men. When boys and trees are good comrades, little is to be feared for either of them.

THE TRANSCRIPT, BOSTON, MASS.

Arbor Day was instituted a number of years ago with an excellent practical purpose in view. It was suggested by the rapid exhaustion of our forests and the apparent indifference of the public to the conservation of tree life. Its observance has doubtless been productive of some benefit. It may be credited to some extent to the more responsible feeling with respect to the preservation or reproduction of our forests and the more individual trees which furnish shade and contribute to the beauty of the landscape. But in too many cases the tree planting which Arbor Day proclamations exhort us to promote is more honored in the breach than the observance, or else it is a mere ceremonial that is satisfied with sticking a sapling into the ground and leaving it, with no care except such as nature provides thereafter.

THE SENTINEL, KNOXVILLE, TENN.

Tree Planters of America

There is an organization with its home office at Chicago, called the National Business League of America. It commends itself through its board of directors and other officers and committees. Among the vice-presidents is Col. Robert J. Lowry, of Atlanta, Ga. This League is trying to create sentiment in favor of tree-planting. One of its suggestions is the organization of the boys of the land as the Tree Planters of America. Arbor Day has been an established institution in many states for many years. It is a good thing except that it seems to inculcate the notion that there is one day for planting trees. The Tree Planters of America are to plant trees every day. The idea is a good one. There are only 965,000 acres of reforested land in the whole country, and there are more than 56,000,000 acres of land that would surely bring a higher return if planted in trees than in anything else.

THE REVIEW, ALLIANCE, OHIO.

Planting of Forests

Idea Gaining that Farmers should Grow Trees, the
Same as Any Other Crop

The matter of tree forestry is now having considerable attention among agricultural people, the idea looking toward the reforestation of a certain portion of our lands with timber for the future generation.

OPINIONS OF THE PRESS

It is now proposed to organize the farmer boys and young men of the country into a great national body to be known as the "Tree Planters of America"; these to act in conjunction and co-operation with the forestry department at Washington.

It is reckoned that as a nation we are fast approaching a timber famine, the estimate being that 300,000,000 acres of timber out of the original forests of 850,000,000 acres have been cut and marketed or destroyed by forest fires, and that the day is here when action is necessary for a replenishment.

The idea is fast gaining strength that the farmer should raise his crop of trees as he does other products of the farm, not that he himself will see its advantages and reap its benefits, but that the crop will be one in perpetuity from father to son throughout the future years.

THE BEACON, AURORA, ILL.

Bending the Twig

"As the twig is bent, the tree is inclined."

This truism has been blazing the way through the forests of civilization from time immemorial. It applies to the material as well as to the mental and the spiritual. Bring up a boy in the way he should go and when he is old he will not depart therefrom.

Applying this principle to present day needs in the United States, the National Business League of America proposes the establishment of "The Tree Planters of America." Encourage the boys of the country to plant trees and thus reforest the areas which have been swept by commerce and by fire. That is the object of "The Tree Planters of America."

The idea is a splendid one. Let it be given every encouragement. A host of Farmers' institutes are now being held in our own and surrounding counties. We hear the boys telling how to raise corn and how to test their father's milk herds. Let them also take interest in tree planting. The point is a vital one with them as it is with the business world at large.

THE EVENING STAR, WASHINGTON, D. C.

James Russell Lowell said once: "I think no man does anything more visibly useful to posterity than he who plants a tree." Many wise men have said the same thing, clothing the idea in different words. There is romance and utility in the judicious planting of trees. Too many farmers in the desire to increase their tillable acreage slaughter trees, so that they are without shade around the house, without a few trees under which stock may seek shelter from the summer sun and without a wood lot. In this they err.

OPINIONS OF THE PRESS

THE NEWS, DAYTON, OHIO

Tree Planting

There should be systematic tree planting in profitless pastures, nooks, ravines, on hillsides and house lawns, on useless or worn out spots or partly denuded forest areas on the farm, and in every place where the soil is not yielding a reasonable contribution to the general welfare.

Not only on the farm but in the suburbs of our large towns and cities tree planting for use and ornamentation, should be practiced by every interested person. And who can claim to be not interested in beautifying the streets and lawns of cities with trees?

There should be means for properly educating tree planters in how to go about the work, what varieties are best adapted for the spots to be covered, and how to cultivate, prune and care for them after they have once started growing. Diseases and parasites of trees should be explained and how they can be exterminated.

Tree planting is a great and permanent work which ought to receive every encouragement.

The Tree Planters of America is the name of a proposed organization, the purpose of which is to enlist the co-operation of the boys of the country. Every farmer's boy is said to be eligible to membership.

It is a good plan. There are to be subdivisions, each state in the union to have a full organization, with the governor at the head and various advisors appointed by that official to help manage the organization. Every boy and girl who is interested can become a member, and grown persons who confess enough interest and pride in the future of the country to join hands with the excellent plan.

By joining this organization farmer boys and girls will certainly receive a great deal of scientific information about trees and plants. It is a good movement, which should succeed immediately.

ADDENDA.

From the foregoing, and a host of unpublished commendations from the people and the press, it seems certain that public opinion is practically unanimous in favor of accomplishing reforestation along the lines indicated.

The field for tree planting, as shown by forestry statistics, is so vast that only the national, state, and lesser governments can efficiently conduct the work. Under such wise direction the reforestation problem would be economically solved for succeeding generations for all time.

While the "Tree Planters of America" is everybody's movement, and local associations for the purpose may be organized anywhere, it is believed that the initiative to a comprehensive country-wide system involves a proclamation by the President of the United States.
